

FitBuddy

Phase 7: Documentation Phase

Smart Fitness and Wellness Application

1. Purpose

Documentation records how FitBuddy was built and how it is used, so it can be understood, maintained, and extended.

2. Documents Prepared

Document	Contents
Project Report	Abstract, problem, requirements, design, development, testing, results
User Manual	Steps to register, set goals, view recommendations, log activities, check progress
Technical Documentation	Architecture, database schema, API list, setup and installation steps
Test Report	Test cases, results, and defect log
Code Documentation	Comments and module descriptions in the source code

3. User Guide (Summary)

- Register and log in to FitBuddy
- Enter age, weight, height, activity level, and goal
- Review recommended workouts and nutrition tips
- Follow a workout and record it in the activity log
- Open the Progress page to monitor your improvement

4. Installation Steps

- Install Python and MySQL
- Import the FitBuddy database schema
- Configure database credentials in the backend settings
- Install required Python packages and run the server
- Open the application in a web browser

5. Conclusion

FitBuddy provides a convenient, technology-based solution for managing fitness and building healthier daily habits by combining goal setting, personalized recommendations, activity recording, and progress monitoring.

6. Future Scope

- Wearable device integration (smartwatches, fitness bands)
- AI-based personal coaching and adaptive plans
- Dedicated mobile application
- Social features such as challenges and leaderboards
- Diet plan generation with meal photo analysis

7. References

- WHO guidelines on physical activity
- MySQL, Python, and web development official documentation
